USER GUIDE

Bot Hosting

Host your Telegram bot on MJK servers in a few minutes.
Bring your own PHP source, or let MJK AI write the bot for you.

FIVE STEPS

Quick start

1

Connect your wallet

Press **Connect wallet** and approve in your TON wallet. Your wallet is your account, there is no sign-up.

2

Top up your balance

Choose $5 to $1000 and pay in **Gram on the TON mainnet**. Your balance updates once the blockchain confirms the payment. If it is slow, press **Check payment status**.

3

Create your bot in Telegram

Open `@BotFather`, send `/newbot`, follow the questions and copy the **bot token** it gives you. Keep it private.

4

Host a bot

Pick **I have a PHP source** (upload a .php file, 50 KB max) or **Write it with MJK AI** (describe the bot in up to 400 characters). Paste your bot token, choose the duration (1 to 12 months) and press **Host my bot**.

5

Watch it go live

The page shows every step: payment, checks, upload, webhook. When it says your bot is live, open it in Telegram and send `/start`.

SIMPLE AND FIXED

Prices

HOSTING	REQUEST FEE	TOP-UP
$3 / month	**$0.02**	**$5** to **$1000**
1 to 12 months, up to $36 per year.	For every source check or AI code request. It is kept even if the request is rejected.	Paid in Gram on TON. The balance is shown in USD.

KNOW THE RULES

What your bot can and cannot do

YOUR BOT CAN

- Answer messages and commands, and show buttons.
- Read data from normal web addresses or **.json** files.
- Send text, photos and files by link or file id.
- Work in private chats and in groups.

YOUR BOT CANNOT

- Remember anything. Every message is handled on its own, with no database and no saved files.
- Delete, create or rename files, or look into other folders.
- Run commands or change server settings.
- Load other file types or unknown paths.
- Use heavy resources: 10 MB RAM, 2 requests at the same time.

GET IT RIGHT THE FIRST TIME

Writing your bot with MJK AI

- Say clearly what the bot should answer to each command or button, in your own language.
- Buttons that open a link need the **full address** (for example `https://your-site.com/page`). Without it the AI leaves the button out.
- Ideas that need memory (user lists, counters, notes, reminders, broadcasts) cannot run here. The request is declined with a short reason.
- Your bot token is never sent to the AI. It is added only when your bot is uploaded.

YOUR HOSTINGS

- **Renew** before the end date to keep your bot online.
- If a hosting expires, the bot stops but you still have about **7 days** to renew it. After that it is removed for good.
- **Deleting** a hosting does not refund it. The hosting history cannot be erased.

IF SOMETHING GOES WRONG

- **Source rejected:** the hosting price returns to your balance. The $0.02 fee stays.
- **Problem on our side:** everything you paid for that request is returned.
- **Bot does not answer:** check the token, and that your texts are not empty and every button link is complete.
- **Page closed or connection lost:** open My hostings and check your balance. Unfinished requests are refunded automatically.
